

Installation of juice shop (Web vulnerable application)

<https://github.com/juice-shop/juice-shop>

Install via Docker (Recommended for simplicity):

Docker is a popular way to run Juice Shop since it packages everything in a container.

- **Install Docker:**
 - Download Docker for your operating system.
- **Run Juice Shop using Docker:**

- Open a terminal or command prompt.
- Pull the Juice Shop Docker image:

```
docker pull bkimminich/juice-shop
```

- Run the Juice Shop container:

```
docker run -d -p 3000:3000 bkimminich/juice-shop
```

- Juice Shop will now be accessible at <http://localhost:3000> in your browser.

After installation, you can access the Juice Shop interface through a web browser by navigating to <http://localhost:3000> or the appropriate IP address/URL if deployed on a server or cloud.
